ABSTRACT:

PROBLEM TO BE SOLVED: To provide an order receipt/placement system of photographic development, a photographed image data transmitter, an accepting device of the photographic development and a storage medium, to enable an orderer to transmit image data photographed by a digital camera from a remote place to a reception center by using a PHS public line network, to transfer the data from the reception center to a processing station specified by the orderer, and to receive photographs at the specified processing station.

SOLUTION: The order receipt/placement system of the photographic development for accepting development request of the photographs from a remote place and to arrange for the processing station is provided with a PHS terminal 11 for transmitting the photographed image data by the digital camera 12 via the PHS public line network 13 and the reception center 14 for receiving the photographed image data transmitted from the PHS terminal 11 via the PHS public line network 13, and to transfer the photographed image data to the specified processing centers 16-1, 16-2 to 16-N.
